SWING BED SKILLED

WELCOME:

At **Hospital District #6 Anthony & Harper**, we understand there are times when a patient no longer needs the acute care setting-yet they may not feel strong enough to return home. For those patients we offer a comforting alternative. Our 'turn the corner' **swing bed skilled** program is designed to provide patients with individualized, in hospital **care and rehabilitation** to help reach an optimal level of functioning. With a combination of **first-rate rehabilitative therapies, attentive nursing care and medical supervision**, patients gain the strength, functionality, balance and range of motion needed for self-care with confidence.

We are Ready to Help you Heal.

WHO IS INVOLVED IN YOUR CARE?

Patients receive skilled rehabilitation, evaluation, and treatment services as prescribed. Our multidisciplinary team providing these services includes:

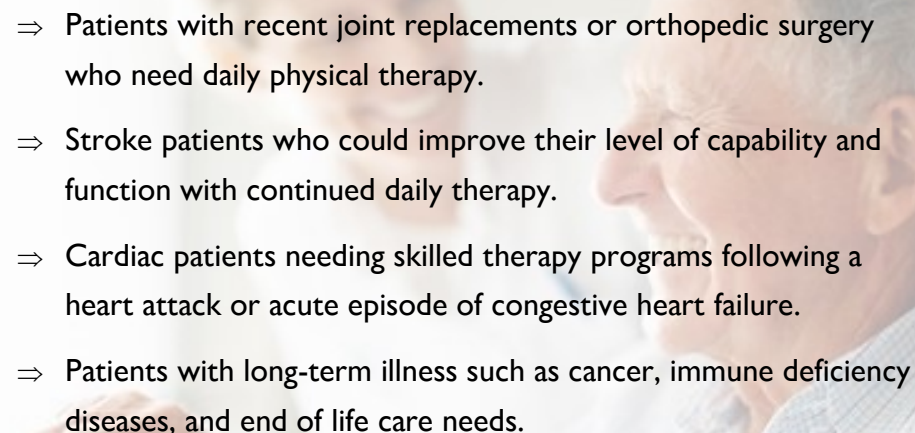

Providers: Board certified physicians, PA's, and Nurse Practitioners work together to care for each patient and are available 24 hours a day. These experts may also request consultations with other specialists during your stay.

Nurses: HD6 nurses are strong, yet compassionate. They walk with determination, yet have the gentlest of touch. Our qualified registered nurses provide daily, individualized, quality care to each and every patient.

Rehabilitation Team: Our comprehensive rehabilitation team includes Physical Therapists, Occupational Therapists, Respiratory Therapists, Speech Therapist, Nurses, and CNA's. Services provided include strength and endurance training, range of motion and therapeutic exercise, gait training, neuromuscular reeducation, lymphedema management, and orthotics fitting.

Case Management: Our case manager coordinates with the referring institution to ensure a smooth transition and works with insurance companies to determine eligibility and coverage for benefits, care coordination and discharge planning. Each patient is interviewed to obtain information that helps the multidisciplinary team create a personalized plan of care. In addition, they work to ensure that the appropriate health care and social service support and resources have been identified and coordinated upon discharge.

WHO ARE CANDIDATES FOR SWING BED SKILLED SERVICES

- 
- ⇒ Patients with recent joint replacements or orthopedic surgery who need daily physical therapy.
 - ⇒ Stroke patients who could improve their level of capability and function with continued daily therapy.
 - ⇒ Cardiac patients needing skilled therapy programs following a heart attack or acute episode of congestive heart failure.
 - ⇒ Patients with long-term illness such as cancer, immune deficiency diseases, and end of life care needs.
